

AMENDMENTS TO THE SPECIFICATION

In the Specification:

Please replace page 8, lines 14-28 with the following amended paragraph:

Fig. 4 illustrates an aspect of the present invention relating to a system 180 which decodes closed captioned data associated with a communication. The system 180 includes an Internet TV system ^{[[192]]} 182 which displays a television signal broadcast over the Internet. The system includes a closed captioned text system which extracts and displays closed captioned information in connection with the broadcast. A closed captioned decoding system 186 decodes the closed captioned information (CCI) and converts the CCI to a format suitable for use by a keyword generating system (KWGS) 188. For example, the CCI may be converted into ASCII text which is acted upon by the KWGS to generate key words and/or key terms to be employed by a search engine 190. The search engine 190 performs a search using the generated key words and/or key terms and a search results display system (SRDS) 192 displays the search results (*e.g.*, URLs corresponding to websites containing content related to the closed captioned information of the broadcast). The SRDS 192 may store all or portions of the search results. Furthermore, the SRDS 192 may comprise a plurality of computer systems, each computer system performing different or similar functions with respect to displaying and storing all or respective portions of the search result data.
